Salary Range	\$110000 - \$180000 / per year	Visa Sponsorship	None Available

Job Description

About Vocca

Vocca builds AI voice agents for healthcare, automating appointment scheduling, inbound call handling, and patient-provider communication so clinical staff can focus on care. The company has validated strong product-market fit in France, where it serves over 600 practices with 22x year-over-year growth, and is now entering the US market from its New York office. Vocca has raised a \$5.5 million seed round and is already signing its first US logos.

About the Role

Vocca is signing its first US customers and needs a founding operator to own everything that happens after the sale: implementation, deployment, customer success, and account expansion. This is a greenfield role with no existing US ops playbook, reporting directly to the CEO, and sitting at the center of Vocca's ability to retain and grow its early US customer base. The primary metric is net revenue retention, and the person in this seat will build the US ops function from the ground up, then grow it into a three-person team. Success in the first year looks like roughly \$1 million in ARR deployed and in production across US accounts, with a replicable onboarding process documented and handed off.

What You'll Own

- Own the full post-sale lifecycle for Vocca's US customers: configure and deploy signed accounts into production, drive time-to-go-live, and maintain a high successful-deployment rate.
- Serve as the primary point of contact for customer success, support, and account management so the sales function stays focused on new business.
- Drive retention and expansion, including upsell and cross-sell, against a personal upsell quota; net revenue retention is the core performance metric for this role.
- Build and document a replicable US onboarding and deployment playbook covering configurations, processes, and best practices.
- Develop deep product mastery to configure and go live independently, including working with AI integrations and no-code tooling as needed.
- Hire and lead a small ops team as the customer base grows, with a target of three people by year-end.

Must-Have

1. 3 to 5 years of experience in a customer-facing deployment, implementation, or customer success role at a

fast-moving startup or technology company.

2. Technically oriented with strong product acumen: comfortable configuring software, working with integrations, and picking up new products quickly without an engineering background being required.
3. Client-facing presence and communication skills: able to build trust with practice operators and clinical staff and represent Vocca professionally.
4. Highly organized, logical, and strong at problem solving; capable of owning a customer portfolio and managing multiple workstreams simultaneously.
5. Entrepreneurial, self-directed, and comfortable operating without a ready-made playbook in an early-stage environment.
6. In-person in New York City, minimum three days per week, ideally five.

Nice-to-Have

- Experience at an early-stage SaaS company, ideally in a deployment, implementation, or ops role.
- Background in healthcare or familiarity with how clinical practices operate.
- Experience at a high-caliber technology organization known for strong talent (e.g., Palantir, Decagon, or similar).
- Top university background.
- Has built side projects or products, or shows clear entrepreneurial initiative outside a formal role.

Compensation

- \$110K to \$180K base plus variable comp tied to upsell performance, with a roughly \$200K personal upsell quota.

Benefits & Perks

- Medical, dental, and vision coverage
- Employer-sponsored health contributions
- 401(k) retirement plan
- Unlimited PTO
- Competitive equity
- Work expenses reimbursed
